For Local Testing:

Confirm python3 is installed on your computer

Run `python -version` in your terminal to confirm it exists. If not, run `pip install python3`. Our repo contains a `requirements.txt` file so you should not need to install additional modules to run the program locally.

Clone Repository

Our repository is here: <https://github.com/alhamilton1111/Capstone2022>

– this screenshot includes the code button where you can find the download links for the program. –

We recommend navigating in your terminal to your project folder. Copy the link shown in the screenshot above to your clipboard.

Type in `git clone https://github.com/alhamilton1111/Capstone2022.git`

Type in `cd Capstone2022` to enter the project folder.

Type in `python3 run.py` to launch the app.

Open a browser and type in `localhost:5000` to see the application on your local machine.

Credentials

Use your own email credentials to confirm for the Employer account or jump right in with our created Employer account on the Heroku app <Jim Henson>:

Email	Password
your own email	a string of your choice
jim@jimhenson.com	muppets

The email credentials to confirm for the Candidate account are:

Email	Password
your own email	a string of your choice

As the Employer you can also access the Candidate results by copying the Quiz Key from the Make A Quiz page and providing that to the form.
